Project Name	Retail Store Stock Inventory Analytics

Understanding The Dataset:

Preparing the data's using months,year,days etc

The screenshot displays the IBM Cognos Analytics web application. The browser address bar shows a URL with session identifiers. The application header includes the text 'IBM Cognos Analytics with Watson' and a search bar. The main interface is divided into three panels: 'Sources' on the left, 'Data module' in the center, and a data grid on the right. The 'Sources' panel lists 'mock_kaggie.csv'. The 'Data module' panel shows a tree structure with 'retail' as the root, containing 'Navigation paths' and 'mock_kaggie.csv'. Under 'mock_kaggie.csv', there are fields: 'Row Id', 'Month data', 'date', 'sales', 'stock', and 'price'. The data grid on the right shows 20 rows of data. The first row is a header with columns: 'TI', 'Row Id', 'Month data', 'date', 'sales', 'stock', and 'price'. The subsequent rows contain numerical values for 'Row Id', 'Month data', 'date', 'sales', 'stock', and 'price'.
